

The Wöhlk Contactlinsen GmbH

The forerunner of the modern contact lens was invented in Kiel: In 1946, visionary and tinkerer Heinrich Wöhlk tested the world's first dimensionally stable contact lens, which he had developed, on himself. In doing so, he not only founded modern contact optics, but also laid the foundation for today's Wöhlk Contactlinsen GmbH.

The founder's thirst for research, wealth of ideas and passion are still deeply anchored in the DNA of our company today. Wöhlk is the German market leader in the field of individual contact lenses and a renowned pioneer in the development of novel and compatible materials, innovative manufacturing processes and high-quality products. The name Wöhlk stands not only for exceptional quality, state-of-the-art technology and innovative solutions for better vision, but also for "Made in Germany". Research, development and production take place at the company's headquarters in Schönkirchen near Kiel - with a research laboratory, development department and the company's own contact lens studio.

Under the motto "My lens. Fits perfectly." around 140 highly qualified and specialized professionals work under the leadership of Managing Director Dr. Dirk Lauscher to not only fulfill customers' wishes for the products, but to exceed them time and again - from engineers and physicists to chemists and software developers.

Since 2020, Wöhlk Contactlinsen GmbH has been a subsidiary of the Japanese contact lens manufacturer SEED Co, Ltd. With this international cooperation, the North German contact lens producer strengthens its position on the international market and expands its portfolio at the same time: While Wöhlk is an expert for individual contact lenses and the German market leader in this sector, SEED Contact Lens focuses on the production of daily disposable lenses.

In addition to the results of its own research projects, Wöhlk also benefits from their decades of experience and from close cooperation with ophthalmologists and opticians. The common vision: superior contact lenses for the best possible quality of vision and maximum wearing comfort.
